TEXTILE DYEING - CottonWorks

Textile Dyeing is an important aspect of modern textiles. The color of a textile product is obtained by dyeing the fiber, the finished product is then fashioned over several weeks time. The dye itself is the major product of the fermentation process. Figure 1 shows the indigo plants and beans, as well as the CO2 Dyeing – Dyesco

The dye is distributed evenly over the fabric and the technology allows for easy color correction. The dye penetrates deep into the fibers creating intense colours with excellent quality characteristics. GEOGRAPHICAL FREEDOM. Dyeing without water equals geographical freedom, becoming completely independent from clear water availability.

How Sustainable Dyeing is Changing the Textile Industry

Mar 22, 2021 - Cotton dyeing is a longer and more water and less-intensive process, due to the negative surface of cotton fibers. This means that usually cotton only takes up about 75% of the dye that is used. In order to make sure colors hold, dyed fabric or yarn is washed and heated over and over again, producing huge amounts of wastewater.
