Linux Operations and Administration Alfred Basta  
2012-07-23 LINUX  
OPERATIONS AND  
ADMINISTRATION  
introduces readers to Linux operations and system administration through a unified installation, using virtual machines. This text is more effective than those that take a professional

approach because it eliminates confusion from working with differing hardware configurations, while allowing users to test interoperability between Linux and Windows. Detailed, yet reader-friendly, Linux Operations and Administration makes it easy to learn Linux and practice it with helpful in-text features like learning

objectives and key terms, as well as items for self assessment such as review questions, hands-on activities, and case projects. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

**Learning to Rank for Information Retrieval and Natural Language Processing, Second Edition**

Hang Li 2022-05-31

Learning to rank refers to machine learning techniques for training a model in a ranking task. Learning to rank is useful for many applications in information retrieval, natural language processing, and data mining. Intensive studies have been conducted on its problems recently, and significant progress has been made. This lecture gives an introduction to the area including the fundamental problems, major approaches, theories,

applications, and future work. The author begins by showing that various ranking problems in information retrieval and natural language processing can be formalized as two basic ranking tasks, namely ranking creation (or simply ranking) and ranking aggregation. In ranking creation, given a request, one wants to generate a ranking list of offerings based on the features derived from the request and the offerings. In ranking aggregation, given a request, as well as a number of ranking lists of offerings, one wants to generate a new ranking list of the offerings. Ranking creation (or ranking) is the major problem in learning to rank. It is usually formalized as a supervised learning task. The author gives detailed explanations on learning for ranking creation and ranking aggregation, including training and testing, evaluation, feature creation,

and major approaches. Many methods have been proposed for ranking creation. The methods can be categorized as the pointwise, pairwise, and listwise approaches according to the loss functions they employ. They can also be categorized according to the techniques they employ, such as the SVM based, Boosting based, and Neural Network based approaches. The author also introduces some popular learning to rank methods in details. These include: PRank, OC SVM, McRank, Ranking SVM, IR SVM, GBRank, RankNet, ListNet & ListMLE, AdaRank, SVM MAP, SoftRank, LambdaRank, LambdaMART, Borda Count, Markov Chain, and CRanking. The author explains several example applications of learning to rank including web search, collaborative filtering, definition search, keyphrase extraction, query dependent summarization, and re-

ranking in machine translation. A formulation of learning for ranking creation is given in the statistical learning framework. Ongoing and future research directions for learning to rank are also discussed. **Law: A Very Short Introduction** Raymond Wacks 2008-03-27 Law underlies our society - it protects our rights, imposes duties on each of us, and establishes a framework for the conduct of almost every social, political, and economic activity. The punishment of crime, compensation of the injured, and the enforcement of contracts are merely some of the tasks of a modern legal

system. It also strives to achieve justice, promote freedom, and protect our security. The result is a system that, while it touches all of our daily lives, is properly understood by only a few, with its impenetrable jargon, obsolete procedures, and interminable stream of Byzantine statutes and judgments of the courts. This clear, jargon-free Very Short Introduction aims to redress that balance, as it introduces the essentials of law and legal systems in a lively, accessible, and stimulating manner. Explaining the main concepts, terms, and processes of the legal system, it focuses on the Western tradition (the common law and the civil law), but also includes discussions of other legal systems, such as customary law and Islamic law. And it looks to the future too, as globalization and rapid advances in technology place increasing strain on

our current legal system. ABOUT THE SERIES: The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area. These pocket-sized books are the perfect way to get ahead in a new subject quickly. Our expert authors combine facts, analysis, perspective, new ideas, and enthusiasm to make interesting and challenging topics highly readable.

Leadership Coaching is an  
essential tool for anyone  
who wants to learn to coach  
or improve their coaching  
skills. Written by a top  
Christian coach trainer, it is  
filled with real-life stories,  
practical tools and  
application exercises that  
bring coaching techniques  
to life. Part I is an in-depth  
look at how coaching fits  
with the purposes of God.  
Starting with key biblical  
concepts about how God  
builds leaders, this book  
goes beyond proof-texting  
to present an integrated,  
values-based paradigm for

leadership coaching. Part II  
uses a hands-on, interactive  
approach to show you how  
to coach. Utilizing the seven  
key elements of effective  
coaching as a framework,  
each facet of the coaching  
relationship is explained in  
detail. Then follow-up  
Master Class sections help  
you internalize the key  
concepts and try them out  
in real life. Leadership  
coaching is a great  
introduction to a powerful  
way of helping others grow.

*Left for Dead* Pete Nelson  
2002-05-14 For fans of sea battles, adventures, and war stories like *Unbroken*, this is the incredible true story of a boy who helps to bring closure to the survivors of the tragic sinking of the USS *Indianapolis*, and helps exonerate the ship's captain fifty years later. Hunter Scott first learned about the

sinking of the USS *Indianapolis* by watching the movie *Jaws* when he was just eleven-years-old. This was fifty years after the ship had sunk, throwing more than 1,000 men into shark-infested waters—a long fifty years in which justice still had not been served. It was just after midnight on July 30, 1945 when the USS *Indianapolis* was torpedoed by a Japanese submarine. Those who survived the fiery sinking—some injured, many without life jackets—struggled to stay afloat as they waited for rescue. But the United States Navy did not even know they were missing. As time went on, the Navy needed a scapegoat for this disaster. So it court-martialed the captain for “hazarding” his ship. The survivors of the *Indianapolis* knew that their captain was not to blame. For fifty years they worked to clear his name, even after his untimely death. But the navy would not budge—not

until Hunter entered the picture. His history fair project on the Indianapolis soon became a crusade to restore the captain's good name and the honor of the men who served under him. Praise for *Left for Dead*: Christopher Award Winner An ALA-YALSA Best Nonfiction for Young Adults Book "Compelling, dreadful, and amazing."—VOYA "This exciting, life-affirming book about war heroics and justice . . . proves without question the impact one student can have on history."—Booklist "Well written and well documented ... this excellent presentation fills a void in most World War II collections"—School Library Journal "Young readers . . . will no doubt be inspired by the youth's tenacity—and by the valor of those who served on the Indianapolis."—The Horn Book
