**Women Classical Scholars** Rosie Wyles 2016-10-27 Women Classical Scholars: Unsealing the Fountain from the Renaissance to Jacqueline de Romilly is the first written history of the pioneering women born between the Renaissance and 1913 who played significant roles in the history of classical scholarship. Facing seemingly insurmountable obstacles from patriarchal social systems and educational institutions--from learning Latin and Greek as a marginalized minority, to being excluded from institutional support, denigrated for being lightweight or over-ambitious, and working in the shadows of husbands, fathers, and brothers--they nevertheless continued to teach, edit, translate, analyse, and elucidate the texts left to us by the ancient Greeks and Romans. In this volume, 20 essays by international leaders in the field chronicle the lives of women from around the globe who have shaped the discipline over more than 500 years. Arranged in broadly chronological order from the Italian, Iberian, and Portuguese Renaissance through to the Stalinist Soviet Union and occupied France, they synthesize illuminating overviews of the evolution of classical scholarship with incisive case-studies into often overlooked key figures: some, like Madame Anne Dacier, were already famous in their home countries but have been neglected in previous, male-centered accounts, while others have been almost completely lost to the mainstream cultural memory. This book identifies and celebrates them--their frustrations, achievements, and lasting records; in so doing it provides the classical scholars of today, regardless of gender, with the female intellectual ancestors they did not know they had.

**Epic Interactions** M. J. Clarke 2006-09-28 This collection of essays celebrating the career of Jasper Griffin, one of the foremost modern scholars of classical epic, surveys the epic tradition from the eighth century BC to the nineteenth century of our era.

**Interpreting Herodotus** Thomas Harrison 2018-03-15 Charles W. Fornara's Herodotus: An Interpretative Essay (Oxford, 1971) was a landmark publication in the study of the great Greek historian. Well-known in particular for its main thesis that the Histories should be read against the background of the Atheno-Peloponnesian Wars during which it was written, its insight and penetrating discussion extend to a range of other issues, from the relative unity of Herodotus' work and the relationship between his ethnographies and historical narrative, to the themes and motifs that criss-cross the Histories and how 'history became moral and Herodotus didactic'. Interpreting Herodotus brings together a team of leading Herodotean scholars to look afresh at the themes of Fornara's seminal Essay in the light of the explosion of scholarship on the Histories in the intervening years, focusing particularly on how we can interpret Herodotus' work in terms of the context in which he wrote. What does it mean to talk of the unity of the Histories, or Herodotus' 'moral' purpose? How can we reconstruct the context in which the Histories were written and published? And in what sense might the Histories constitute a 'warning' for his own, or for subsequent, generations? In developing and interrogating Fornara's influential ideas for a new generation of scholars, the volume not only asserts their enduring value to scholarship, but also offers a wealth of insights and new perspectives on the 'Father of History' that attests to the vibrancy and diversity of contemporary engagement with Herodotus.

**The Languages of Aristophanes** Andreas Willi 2003-09-19 By examining linguistic variation in Aristophanic comedy, Andreas Willi opens up a new perspective on intra-dialectal diversity in Classical Attic Greek. A representative range of registers, technical languages, sociolects, and (comic) idiolects is described and analysed. Stylistic and statistical observations are combined and supplemented by typological comparisons with material drawn from sociolinguistic research on modern languages. The resulting portrayal of the Attic dialect deepens our understanding of various socio-cultural phenomena reflected in Aristophanes' work, such as the spread of 'sophistic' culture, the re-evaluation of gender roles, and the status of foreigners in Athenian society.

**Classical Commentaries** Christina S. Kraus 2016-01-02 This rich collection of essays by an international group of scholars explores commentaries in many different languages on ancient Latin and Greek texts. The commentaries discussed range from the ancient world to the twentieth century. The volume pays particular attention to individual commentaries, national traditions of commentary, the part played by commentaries in the reception of classical texts, and the role of printing and publishing.

**Liddell and Scott** Christopher Stray 2019-10-17 The Greek-English Lexicon of Liddell and Scott is one of the most famous dictionaries in the world, and for the past century-and-a-half has been a constant and indispensable presence in teaching, learning, and research on ancient Greek throughout the English-speaking world and beyond. Despite continuous modification and updating, it is still recognizably a Victorian creation; at the same time, however, it carries undiminished authority both for its account of the Greek language and for its system of organizing and presenting linguistic data. The present volume brings together essays by twenty-two scholars on all aspects of the history, constitution, and problematics of this extraordinary work, enabling the reader both to understand its complex history and to appreciate it as a monument to the challenges and pitfalls of classical scholarship. The contributors have combined a variety of approaches and methodologies - historical, philological, theoretical - in order to situate the book within the various disciplines to which it is relevant, from semantics, lexicography, and historical linguistics, to literary theory, Victorian studies, and the history of the book. Paying tribute to the Lexicon's enormous effect on the evolving theory and practice of lexicography, it also includes a section looking forward to new developments in dictionary-making in the digital age, bringing comprehensively up to date the question of what the future holds for this fascinating and perplexing monument to the challenges of understanding an ancient language.

**Metapoetry in Euripides** Isabelle Torrance 2013-01-31 Metapoetry in Euripides is the first detailed study of the self-conscious literary devices applied within Euripidean drama and how these are interwoven with issues of thematic importance, whether social, theological, or political. In the volume, Torrance argues that Euripides employed a complex system of metapoetic strategies in order to draw the audience's attention to the novelty of his compositions. The metapoetic strategies discussed include intertextual allusions to earlier poetic texts (especially to Homer, Aeschylus and Sophocles) which are often developed around unusual and memorable language or imagery, deployment of recognizable trigger words referring to plot construction, novelties or secondary status, and self-conscious references to fiction implied through allusion to writing. Torrance also looks at and compares metapoetic techniques used in tragedy, satyr-drama, and old comedy to demonstrate that the Greek tragedians commonly exploited metapoetic strategies, and that metapoetry is more pervasive in Euripides than in the other tragedians. While Euripides shares some metapoetic techniques with old comedy, these remain implicit in his tragedies (but not in his satyr-dramas).

**C. S. Lewis and His Circle** Roger White 2015 For over thirty years, the Oxford C. S. Lewis Society has met weekly in the medieval college of the University of Oxford. During that time, it has hosted as speakers nearly all those still living who were associated with the Inklings--the Oxford literary circle led by C. S. Lewis--as well as authors and thinkers of a prominence that nears Lewis's own. C. S. Lewis and His Circle offers the reader a chance to join this unique group. Roger White has worked with Society past presidents Brendan and Judith Wolfe to select the most important talks, which are here made available to the wider public for the first time. They exemplify the best of traditional academic essays, thoughtful memoirs, and informal reminiscences about C. S. Lewis and his circle. The reader will reimagine Lewis's Cosmic Trilogy with former Archbishop of Canterbury Rowan Williams, read philosopher Elizabeth Anscombe's final word on Lewis's arguments for Christianity, hear the Reverend Peter Bide's memories of marrying Lewis and Joy Davidman in an Oxford hospital, and learn about Lewis's Narnia Chronicles from his former secretary. Representing the finest of both personal and scholarly engagement with C. S. Lewis and the Inklings, the talks collected here set a new tone for engagement with this iconic Oxford literary circle--a tone close to Lewis's own Oxford--bred sharpness and wryness, seasoned with good humor and genuine affection for C. S. Lewis and his circle.

**The Essential Turing** B. Jack. Copeland 2004-09-09 Alan Turing, pioneer of computing and WWII codebreaker, is one of the most important and influential thinkers of the twentieth century. In this volume for the first time his key writings are made available to a broad, non-specialist readership. They make fascinating reading both in their own right and for their historic significance: contemporary computational theory, cognitive science, artificial intelligence, and artificial life all spring from this ground-breaking work, which is also rich in philosophical and logical insight. An introduction by leading Turing expert Jack Copeland provides the background and guides the reader through the selection. About Alan Turing Alan Turing FRS OBE, (1912-1954) studied mathematics at King's College, Cambridge. He was elected a Fellow of King's in March 1935, at the age of only 22. In the same year he invented the abstract computing machines - now known simply as Turing machines - on which all subsequent stored-program digital computers are modelled. During 1936-1938 Turing continued his studies, now at Princeton University. He completed a PhD in mathematical logic, analysing the notion of 'intuition' in mathematics and introducing the idea of oracular computation, now fundamental in mathematical recursion theory. An 'oracle' is an abstract device able to solve mathematical problems too difficult for the universal Turing machine. In the summer of 1938 Turing returned to his Fellowship at King's. When WWII started in 1939 he joined the wartime headquarters of the Government Code and Cypher School (GC&CS) at Bletchley Park, Buckinghamshire. Building on earlier work by Polish cryptanalysts, Turing contributed crucially to the design of electro-mechanical machines ('bombers') used to decipher Enigma, the code by means of which the German armed forces sought to protect their radio communications. Turing's work on the version of Enigma used by the German navy was vital to the battle for supremacy in the North Atlantic. He also contributed to the attack on the cyphers known as 'Fish'. Based on binary teleprinter code, Fish was used during the latter part of the war in preference to morse-based Enigma for the encryption of high-level signals, for example messages from Hitler and other members of the German High Command. It is estimated that the work of GC&CS shortened the war in Europe by at least two years. Turing received the Order of the British Empire for the part he played. In 1945, the war over, Turing was recruited to the National Physical Laboratory (NPL) in London, his brief to design and develop an electronic computer - a concrete form of the universal Turing machine. Turing's report setting out his design for the Automatic Computing Engine (ACE) was the first relatively complete specification of an electronic stored-program general-purpose digital computer. Delays beyond Turing's control resulted in NPL's losing the race to build the world's first working electronic stored-program digital computer - an honour that went to the Royal Society Computing Machine Laboratory at Manchester University, in June 1948. Discouraged by the delays at NPL, Turing took up the Deputy Directorship of the Royal Society Computing Machine Laboratory in that year. Turing was a founding father of modern cognitive science and a leading early exponent of the hypothesis that the human brain is in large part a digital computing machine, theorizing that the cortex at birth is an 'unorganised machine' which through 'training' becomes organised 'into a universal machine or something like it'. He also pioneered Artificial Intelligence. Turing spent the rest of his short career at Manchester University, being appointed to a specially created Readership in the Theory of Computing in May 1953. He was elected a Fellow of the Royal Society of London in March 1951 (a high honour).

**The Stoics on Lekta** Ada Bronowski 2019-07-11 After Plato's Forms, and Aristotle's substances, the Stoics posited the

fundamental reality of lekta - the meanings of sentences, distinct from the sentences themselves. This is the first time in the tradition of Western philosophy that what is signified is properly distinguished from signs and signifiers. The Stoics on Lekta offers a synoptic treatment of the many implications of this distinction, which grants an existential autonomy to lekta: language can only ever express meanings, but what happens to meanings which are there, ready to be said, but which are never actually expressed? It analyses the deep shift in ontological paradigm required by the presence of lekta in reality, and reveals a truly unique, complex, and consistent cosmic view in which lekta are the keystones of the structure of reality. According to this view, we cannot not speak or think in terms of lekta, and for this reason, they are in fact all there is to say. The Stoics' position ignited many fiery debates in antiquity and continues to do so in the modern era: they were the first to be concerned with questions about language and grammar, and

the first to put the relation of language to reality at the heart of the enquiry into human understanding and the place of man in the cosmos. Such questions remain central to life and philosophy to this day, and by explicitly comparing and contrasting the themes and topics discussed to twentieth-century treatments of the status of the proposition, propositional structure, speech act theory, and the relation of attribution of the predicate to a subject-term, this volume seeks to demonstrate the enduring value of a direct Stoic contribution to the contemporary debate.
