Converging Technologies for Improving Human Performance

Mihail C. Roco 2013-04-17 M. C. Roco and W.S. Bainbridge In the early decades of the 21st century, concentrated efforts can unify science based on the unity of nature, thereby advancing the combination of nanotechnology, biotechnology, information technology, and new technologies based in cognitive science.

With proper attention to ethical issues and societal needs, converging in human abilities, societal technologies could achieve a tremendous improvement outcomes, the nation's productivity,

and the quality of life. This is a broad, cross cutting, emerging and timely opportunity of interest to individuals, society and humanity in the long term. The phrase "convergent technologies" refers to the synergistic combination of four major "NBIC" (nano-bio-info-cogno) provinces of science and technology, each of which is currently progressing at a rapid rate: (a) nanoscience and nanotechnology; (b) biotechnology and biomedicine, including genetic engineering; (c) information technology, including advanced computing and communications; (d) cognitive science, including cognitive neuroscience. Timely and Broad Opportunity. Convergence of diverse technologies is based on material unity at the nanoscale and on technology integration from that scale.

Modelling European Railways Peter Marriott 2016-02-29

European railways are characterized by a huge and contrasting range of locomotives, liveries, rolling stock, stations and infrastructure. In addition, the network incorporates standard, narrow and broad gauges, private and nationalized railways, high-speed corridors, single-track branch lines and rack systems. If that was not appealing enough for the railway modeller, these fascinating railways are also located in dramatically diverse landscapes ranging from the industrial Ruhr to the majestic Alps. If you wish to explore the new and exciting railway modelling opportunities that Europe has to offer, if you need a helping hand and information about where to go, what to read and what to buy, then this is the book for you. It considers how to carry out research across the Channel, and is written by an enthusiastic

railway modeller who has been modelling European railways for twenty-five years and who passionately believes that railway modelling should be fun. It contains information about the modelling tools required, the products that are available and the companies that manufacture them and demonstrates in detail how to install catenary. It also describes, step-by-step, many of the techniques that can be used to create different types of scenery in several European locations. With top tips and advice throughout and including many interesting 'modelling interludes' describing and illustrating models of various railway subjects, this lavishly illustrated book, with over 440 beautiful colour photographs, will appeal to anyone planning to model European railways.
